Wipro ICD Site Report

This report explains what the website at https://bakshilabs.github.io/wipro-icd/ contains, how its parts fit together and what each page argues. It is written so that a reader can understand the whole body of work without opening every page. All facts below are taken from the pages themselves, which were researched on 27 October 2026.

Contents

1. Purpose and audience
2. How the site is organised
3. Reading conventions used on every page
4. The central argument
5. The meeting pages (M1 to M6)
6. The appendix pages (A1 to A14)
7. AI Workflow and Method
8. The unlisted Preparation page
9. Figures worth knowing by heart
10. Points to check before the interview
11. Glossary

1. Purpose and audience

The site supports Arpan Bakshi's application for the ICD Practitioner role in Wipro's Industry Cloud & Digital (IC&D) portfolio in the UK and Ireland (UKI). It is designed to be shown on screen during a panel interview with no set brief, and then shared with Wipro afterwards.

The site does three jobs. It reads Wipro's own public figures to work out what the role has to achieve. It sets out a strategy and a twelve-month plan for achieving it. It then backs every part of that plan with sourced analysis, working models and evidence from Arpan's career.

The work is independent. It draws only on public sources and Arpan's CV, uses no Wipro logo or brand colours, and states in its footer that Wipro did not produce or review it. Every page carries `noindex` so search engines do not list it.

2. How the site is organised

The site has 23 pages in four groups.

Group	Pages	Role
Overview	`overview.html`	A brief in six sections: situation, argument, strategy, plan, vision and pages
Meeting pages	M1 Situation, M2 Fit, M3 Strategy, M4 Banking, M5 Plan, M6 Vision	Short, visual pages for the screen during the interview
Appendix pages	A1 to A14	The full analysis, models and sources behind the meeting pages
About the work	AI Workflow, Method	How the site was built and how the same method would serve a pursuit team

A 24th page, `preparation.html`, is an interview preparation dashboard reachable only by its address.

Navigation as it stands now

Since the latest change on `main`, the navigation bar shows the appendix only, split into five groups:

Menu	Pages
Role (A1 to A3)	The Role, Portfolio, AI Engagement
Market (A4 to A6)	Demand, Competitors, Buyers
Accounts (A7 to A9)	Accounts, Account Map, New Logos
Pursuits (A10 to A13)	Workshops, Pursuits, Deals, Banking Pursuit
First Months (A14)	First Months

AI Workflow and Method sit as links in the header. The overview and the six meeting pages are still built and work at their addresses, but they no longer appear in the navigation. The site's front door (`index.html`) now opens A1 The Role.

3. Reading conventions used on every page

The pages follow a written style guide, and knowing its labels makes the site much easier to read.

- **Sources.** Every page ends with a Sources panel. Each source is marked primary (filings, statutes, regulators, company releases) or press (journalism, analysts, brokers, vendor surveys).
- **"My judgement" and "my estimate".** Ratings, scores, plans and forecasts that are Arpan's view carry one of these labels.
- **"Placeholder figures".** Numbers in the commercial models are stand-ins for Wipro's own data. The models invite the reader to type in real values.

- **“Draft message to test”.** Example client messages are drafts to try with account teams. They are not claims about what Wipro says.
- **“To confirm”.** A claim with only a single secondary source, or one whose status may have changed, is marked this way.
- **Outside reading.** Statements about Wipro’s structure and position are presented as a reading from public sources, with what would confirm them.
- **Named people.** The pages name only Wipro’s chief executive, chief financial officer and Europe chief executive, plus Wipro, Capco and Designit leaders cited on the Account Map with their published titles.

Most pages are interactive. Charts respond to selection, and several pages hold working models with sliders and inputs. Important content is visible without hovering.

4. The central argument

The whole site rests on one chain of reasoning.

What Wipro’s figures say

Four figures from Wipro’s Q2 FY27 results (15 October 2026) and its FY2026 Form 20-F set the brief.

Figure	Reading
98% of revenue from existing clients in Q2 FY27	Growth has to come mostly from accounts Wipro already holds
Clients above US$100m a year fell from 22 (FY24) to 17 (FY25) and 16 (FY26), then rose to 18 (Q2 FY27)	The large-account base eroded and is being rebuilt
Europe grew 5.1% year on year in constant currency, led by BFSI, Consumer and EMR	Europe, 27.4% of IT services revenue, is growing, with banking among the leaders
IT services operating margin of 16.5%	About 7.5 points below TCS and 1.7 points below HCLTech, so margin matters on every deal

Wipro added 33 new clients in Q2 FY27 and 216 in FY26. The CFO, Aparna Iyer, said in January 2025 that “hunting remains a very, very key lever”.

Three asks of the role

From those figures the site derives three things the role has to do:

1. Grow share of wallet in existing accounts, because that is where almost all revenue sits.
2. Open new logos with insight, on a dated reason and a reference, through partners who already hold trust.
3. Hold the margin at the first scope, by setting scope, pyramid and pricing model before a proposal goes in.

The strategy: two moves

The strategy is to grow share of wallet in Wipro's existing UK and Irish accounts first (**Move 1: expand**) and to use that proof to open new ones (**Move 2: new logos**). Both moves start in the first quarter.

The site gives the reason for the order. Existing accounts qualify faster, convert at a higher rate and book order book sooner, and the references they produce make hunting credible.

Move 1 has four parts. - Map IC&D white space in the top UKI accounts with the client partners, banking first. - Attach quality engineering (QE), modernisation and AI to run contracts and renewals, where the added scope offsets price step-downs of 6% to 7% a year. - Run executive workshops on dated forcing events that end in a proactive proposal. - Phase first scopes so order book lands early and the next phase is already named.

Move 2 has four parts. - Take references from Move 1 to targets with a dated trigger, such as bank integrations, resilience rules, DORA and FCA PS26/2. - Build partner-sourced pipeline with Google, Anthropic, AWS, Microsoft and Tricentis. - Open with a fixed-price diagnostic, then expand. - Run hunting as a standing motion from the first quarter.

Why banking leads

Banking leads because the public evidence is strongest there and the dates are fixed.

- **Lloyds Banking Group** is the largest Wipro estate named on the public record. Wipro describes a relationship of more than fifteen years, a Wipro speaker at PegaWorld 2025 put it at 18 years and about 2,500 Wipro staff, and Lloyds with Wipro won two European Software Testing Awards in 2023, including one for its Payment Services Platform.
- **Fixed dates.** FCA PS26/2 incident and third-party reporting applies from 18 March 2027. Purpose codes become mandatory on every CHAPS payment in November 2027. The Bank of England deferred the November 2026 CHAPS address change on 27 August 2026 with no new date.
- **New-logo triggers.** Coventry Building Society absorbs The Co-operative Bank on 1 January 2027. Santander and Nationwide have acquisitions to integrate. The Google Cloud London region failure of 20 October 2026 disrupted several UK banks, and regulators owe the Treasury Committee a full reply by 20 January 2027.

If Arpan's assigned portfolio turns out to be another sector, the site shows that the method holds and only the dates change. Energy suppliers must complete half-hourly settlement migration by 7 May 2027. The PSTN copper switch-off falls on 31 January 2027. Insurers face Consumer Duty on closed books and the pensions dashboards backstop. Public bodies publish procurement pipeline notices each May, and Wipro is on G-Cloud 15.

The plan: twelve months in three phases

Phase	Move 1: expand	Move 2: new logos	Output
Listen, months 1 to 3	Meet every client partner; map footprint, sponsors and white space; agree rules of engagement and credit; learn the cost model from India presales and delivery	Build the target list on dated triggers; agree partner plans with alliance teams	Three to five account plans with IC&D plays; one proactive proposition per top account
Decide, months 4 to 6	Run the first executive workshops; shape phased first scopes with Delivery and Finance	First reference-led meetings; first fixed-price diagnostics proposed	Qualified pipeline at three to four times target; first phased scope signed in a banking account
Deliver, months 7 to 12	Book phase ones; qualify phase twos that reach large-deal size; bring renewals forward with added scope	Convert diagnostics into first contracts; each new logo becomes a Move 1 account	Order book from expansions; large deals qualified for year two; pipeline carried forward

Four measures

1. **IC&D order book booked**: signed total contract value for the portfolio, against Wipro's bookings definition.
2. **Pipeline created and coverage**: new qualified pipeline each quarter, held at three to four times target.
3. **Share of wallet per account**: the shared lead measure, tracked with each client partner.
4. **Win rate**: read against Loopio's 2026 benchmark, which puts the UK RFP average at 47% and the global average at 39%.

The vision

The vision is that the UKI IC&D practice becomes the part of Wipro that client executives call before they write a tender. Each top account carries a standing IC&D point of view refreshed against its regulatory calendar. Each dated event becomes a workshop that ends in a proposal. QE and modernisation enter through run contracts and renewals, AI enters through the data and adoption work those programmes expose, and references compound into a new-logo motion.

5. The meeting pages (M1 to M6)

These six pages carry the case on screen, one per section of the overview. Each is short and links to the appendix pages that hold the evidence.

M1 Situation

M1 presents the four Wipro figures above as large tiles: 98% of revenue from existing clients, the large-client count, Europe's 5.1% growth and the 16.5% margin. A bar chart compares Q2 FY27 operating margins at TCS, Infosys, HCLTech and Wipro, with Wipro fourth. Two more figures show the scale one quarter delivers: US$2,595m of total bookings and US$674m of large deals from nine deals (Wipro counts a deal as large at US$30m or more). An interactive diagram links the figures to the three asks: two figures point at expansion, one at hunting and one at margin.

M2 Fit

M2 sets out four reasons Arpan fits the role, drawn from eighteen years of selling advisory and engineering services to executives in New York and London.

1. **Demand at the top of the client.** At Foster + Partners, as Associate Partner, Arpan led the pitches, bids and competition entries behind more than £10m a year in fees, with presentations to Fortune 500 chief executives. Earlier roles brought more than $3m a year at SOM and more than $2m a year at WSP.
2. **Expansion through the partner who holds the account.** At Foster + Partners Arpan co-created a strategic advisory service line and sold it into clients the design studios already served, including Roche, Genentech, Apple, Oracle and JPMorgan Chase. One result was a multi-year contract with a global pharmaceutical company. The site compares this to an IC&D practitioner working an account owned by a Wipro client partner.
3. **The AI tools Wipro builds its offer on.** At Atlas Learn, which Arpan co-founded, Arpan trains executive teams on Claude, Gemini and Copilot (more than 250 senior professionals, including a FinTech board) and runs sales, marketing and commercial operations. Arpan holds four Anthropic credentials and Microsoft's Copilot Studio credential.
4. **A plan built on Wipro's practices.** Technical design sits with the modernisation and QE practices, Capco and the alliance partners. Arpan positions the role where those practices are least present: getting the chief operating officer into the room, framing the business case and holding the deal shape with Finance, while leading AI solutions hands-on.

A career timeline shows four stops (WSP, SOM, Foster + Partners from 2015 to July 2026, Atlas Learn from October 2025). A heat grid shows how the 17 responsibility lines in the job description draw on five experience strands: advisory sales runs through 13 lines and executive relationships through 12.

M3 Strategy

M3 presents the two moves with a toggle to bring either forward, the appendix pages behind each move, an interactive chart linking three Wipro figures to the order of the moves, and the four measures.

M4 Banking

M4 shows Lloyds on the public record (15+ years, about 2,500 staff, two TESTA 2023 awards), a timeline of six trigger dates from October 2026 to December 2027, and a four-phase land and

expand path whose order book chart toggles between an existing account and a new logo. It ends with entry offers for four other sectors:

Sector	Date	Entry offer
Energy	7 May 2027, half-hourly settlement complete	A two-week settlement readiness check, then integration testing of settlement, billing and data flows
Telecoms	31 January 2027, PSTN switch-off	Automation of outreach and ordering for the last customers to move
Insurance and pensions	Consumer Duty on closed books; dashboards backstop	A closed-book outcomes review, then AI-assisted complaint handling with a person making each decision
Public sector	Pipeline notices each May; G-Cloud 15	An insight brief ahead of the pipeline notice, with a discovery scope bought through G-Cloud 15

M5 Plan

M5 holds the twelve-month swim-lane chart, cards for the people Arpan would meet first, the four measures by phase and a small pipeline model. The model's inputs are the number of accounts, qualified opportunities per account and the Move 1 win rate. Move 1 uses a placeholder £3m average deal awarded one quarter after qualification. Move 2 assumes four pursuits in year one, a £1.5m first deal, a 30% win rate and award two quarters after qualification.

M6 Vision

M6 states the vision and draws it as a five-stop flywheel:

1. A standing IC&D point of view per account, refreshed each quarter.
2. A dated event becomes an executive workshop that ends in a proactive proposal.
3. A phased first scope attached to a run contract or renewal, with the second phase named.
4. A reference: a client who will take a call and a case study with measured results.
5. A new logo, opened on the reference with a fixed-price diagnostic, which then joins Move 1 and restarts the loop.

M6 also lists year-one outcomes for Wipro (order book from phased first scopes from month seven, two or more large deals qualified for year two, two to three banking references) and three working habits, each linked to its own page.

6. The appendix pages (A1 to A14)

A1 The Role

A1 maps the 17 responsibility lines in the job description to the page that answers each and to Arpan's evidence.

- **Headline figures:** £10m+ a year in fees at Foster + Partners, 250+ senior professionals trained on AI, 18 years of client work since 2008, 7 named global clients, 17 responsibility lines mapped.
- **Where the role sits:** Wipro's FY2026 Form 20-F names IC&D as one of five units in the Technology Services business line. UK and Ireland is part of the Europe market unit. The role joins one service line to one market.
- **Responsibility matrix:** the 17 lines are grouped six ways (Growth, Pursuits, Offerings, Commercial, Advisory, Delivery) and also by strategy move. Each row shows which of five strands answers it (advisory sales, executive relationships, AI adoption, digital transformation, workshops), with the evidence and how Arpan would do the job at Wipro.
- **Ten practice offerings:** for each offering in the job description, the page shows Wipro's public offer, how Arpan would sell it and who from Wipro's practices and partners Arpan would bring in. AI solutions on Claude and Gemini is the offering Arpan uses daily.

The 17 lines are: revenue and order book; shaping qualified opportunities; hunting and farming; acting as practice specialist on pursuits; positioning and selling offerings; technology understanding; commercially viable deals; RFPs, proposals and commercials; advising on AI-enabled transformation; executive workshops; large-scale transformation; expanding presence in UKI; AI-enabled engagement models; executive relationships; collaborating with practices and partners; leading transformation programmes; travel within UKI.

A2 Portfolio

A2 places IC&D inside Wipro's structure and maps each of the ten offerings to a buyer problem, a UKI buyer, partners and public proof.

Structure. The page draws Wipro IT Services as four market units (Americas 1, Americas 2, Europe, APMEA), the global business lines (Technology Services, Business Process Services, Consulting including Capco, Engineering) and the AI-Native Business & Platforms Unit with WINGS (run AI), WEGA (build AI) and industry platforms. IC&D sits in Technology Services beside CISS, Enterprise Applications, Data, Analytics and AI, and Designit. In Wipro's words, IC&D "partners with organizations to integrate strategy, design, and technology".

Offerings and buyer problems. A grid scores each offering against six buyer problems: legacy cost and risk, resilience and regulation, customer experience, speed of change, AI in production and connected systems. AI Solutions and Integration touch all six. Highlights from the offering panels:

Offering	Problem	Notable proof
Application and cloud modernisation	Ageing applications cost too much and cloud moves stall after rehosting	75,000+ modernisation experts; Forrester Wave Leader, Q1 2024
Application portfolio rationalisation	Overlapping applications after mergers	Framed as a short paid assessment that opens modernisation scope
Mainframe and legacy Java/.NET	Core rules on COBOL few people understand	GenAI mainframe modernisation with Capco; Phoenix Group ALPHA platform within a £500m, 10-year deal (March 2025)
Integration	Point-to-point interfaces block AI agents	Integration Modernization; positioned as the condition for AI agents to work
Quality engineering and testing	Slow, risky releases and regulators asking for proof	TESTA 2023 wins for Lloyds and RSA; Tricentis Global Platinum with 3,000+ Tosca specialists; Iliad Solutions teaming (March 2026); Everest Group Leader
DevOps and CI/CD	Weeks to production, late security checks	WEGA lifecycle orchestration; Harness collaboration (March 2026)
Digital applications	New channels must scale from day one	Gartner Magic Quadrant Leader, Public Cloud IT Transformation, 2024
Digital experience and commerce	Broken journeys and conduct rules	Designit London; Adobe practice with 860+ accredited consultants; Salesforce Summit partner
AI solutions with Gemini and Claude	Pilots stall before production	Gemini Enterprise for 10,000+ specialists and 1,500 forward-deployed engineers (August 2026); Claude Centre of Excellence with 10,000 experts to certify in 18 months (June 2026)
AI adoption	Licences bought, little real use	50,000+ Copilot licences inside Wipro; 212,663 associates trained under ai360

Partner announcements. A timeline plots dated announcements from July 2024 to October 2026 for Google Cloud, Anthropic, Microsoft, ServiceNow, Salesforce, SAP, banking and QE partners, and Wipro itself. The AI announcements cluster in 2026.

Banking offers. Wipro's Core Banking Transformation practice offers Enable the Core and Extend the Core; Arpan would open with Extend the Core. Payment Transformation and an ISO 20022

practice cover the most time-bound banking work. Capco has UK offices in London, Edinburgh and Glasgow. Wipro was rated an Exceptional Performer in the Whitelane 2026 UKI sourcing study, with 83% satisfaction. A filterable panel covers ten banking and QE partners: Intellect, Temenos, Finastra, Iliad Solutions, Tricentis, Harness, Pega, Guidewire, AWS and Microsoft.

Proposition builder. The reader chooses a move, an account type (life and pensions insurer, retail bank, energy supplier, retailer, central government) and offerings. The page returns placeholder phasing across Discover, Prove and Scale, a draft message, the buyers to meet, the Wipro teams to involve and the partners and proof.

Joint pursuits. A five-step sequence for running a pursuit across market unit, practices and partners: agree the account view with the client partner, bring the practices into one discovery, give the partner a named role, test the message in a workshop, and shape scope and price with Delivery and Finance.

A3 AI Engagement

A3 sets out how Arpan would design AI-enabled customer engagement and lead the programmes that deliver it.

- **Evidence.** An NBER study of 5,179 support agents found AI assistance raised issues resolved per hour by 14%, and by 34% for novice agents. NatWest's Cora handled 12.9m retail conversations in 2025. Intercom's Fin, powered by Claude, resolves 51% on average, with vendor-reported rates from 36% to 86%. Klarna's assistant did the work of 700 agents in 2024, then in May 2025 its chief executive said cost cutting had gone too far and it restarted hiring. Lloyds' Athena knowledge hub cut colleague search time by 66%.
- **Engagement model.** Five channels (mobile app, web and chat, contact centre, branch, agent assist) share one orchestration layer, a model choice of Claude or Gemini, a knowledge and data layer and a guardrail layer. No channel goes live until its data passes a readiness check.
- **Use cases.** Fourteen customer-experience use cases are plotted by value and feasibility, sized by regulatory risk. Agent assist and knowledge search are the safest starting points; automated credit or claims decisions carry the most risk.
- **Human in the loop.** A slider sets AI autonomy from level 1 (suggest) to level 5 (act alone). At level 3, seven of twelve tasks can run with AI acting and people reviewing a sample. Complaint outcomes, credit or claims decisions and support for bereaved or vulnerable customers stay with people.
- **Regulation timeline.** From 5 February 2026 the Data (Use and Access) Act replaced Article 22 with a right of challenge. EU chatbot transparency duties applied from 2 August 2026. EU AI Act high-risk duties for credit scoring and insurance pricing apply from 2 December 2027.
- **Wipro's AI partners.** The Claude Applied AI Centre of Excellence opened in Bengaluru on 16 June 2026. The Gemini Enterprise expansion and LIFT framework (Launch, Ignite, Flywheel, Transform) followed on 27 August 2026.
- **Adoption programme.** Twelve months in five phases: baseline and design, data readiness, pilot agent assist, scale self-service, extend and optimise. Each phase has a gate, and placeholder measures (containment, CSAT, handling time, digital adoption) show a glide path.

A4 Demand

A4 explains why UK and Irish organisations are buying digital, CX, AI and modernisation work now, sector by sector.

Eight headline figures:

Figure	Source
214,600 new Financial Ombudsman complaints in 2025/26, with 30% of resolved cases upheld	FOS
803 hours of unplanned outages at nine major banks, January 2023 to February 2025	Treasury Committee via press
28% of central government systems were legacy in 2024	State of Digital Government Review
UK Customer Satisfaction Index of 78.3 in July 2026, with improvement slowing	Institute of Customer Service
75% of UK financial firms used AI in 2024	Bank of England and FCA
35% of UK firms with 10+ staff used AI in June 2026, and only 10% of those use it extensively	ONS
1.5m copper phone lines still to move before 31 January 2027	ISPreview
8.4m meters moved to half-hourly settlement by mid-May 2026	Elexon

Sector scores. Seven sectors are scored 1 to 5 for four offering groups (AI solutions, CX and digital, app and legacy modernisation, QE). Financial services scores 5 in every column, and every sector scores 4 or 5 for CX and modernisation.

Forcing dates. A timeline holds about 45 dated rules and programmes from 2024 to 2028 across eight rows, including an Ireland and EU row. The dates bunch between late 2026 and mid 2027.

Banking regulation. A jurisdiction panel covers DORA, the 19 critical ICT third-party providers the European Supervisory Authorities designated on 18 November 2025 (Accenture, Capgemini, IBM, Kyndryl, NTT DATA and TCS among them, with Wipro not on the list), euro instant payments, Swift ISO 20022, the EU AI Act, PSD3 and the Payment Services Regulation, and the ECB's supervisory priorities.

What it means for a pursuit. For each sector and Ireland, the page lists buyers, dated pressures, the Move 1 and Move 2 reasons to call, offerings to lead with, Wipro proof and a draft opening message. In financial services the entry offer is QE and payments resilience testing, followed by AI complaint handling and platform modernisation with Capco on the business case.

A5 Competitors

A5 covers the firms Wipro meets in UKI pursuits and how Arpan would position against each.

- **Ratings.** Accenture, Deloitte UK, IBM Consulting, Infosys, Cognizant, Capgemini, HCLTech, Tech Mahindra, Kyndryl, LTM and a group of specialists (Endava, Kainos, Thoughtworks, EPAM, Globant, Publicis Sapient, Valtech) are rated 1 to 5 on UKI scale, AI partnerships, CX and design, modernisation, consulting front end and price position. The reader picks any two dimensions to plot. On UKI scale plus AI partnerships, Accenture and Capgemini score 10 of 10 and Wipro's reference row scores 7.
- **Firm cards.** Each card shows where the firm leads, the Wipro offers that answer it, who to bring in and a draft message. Against Accenture, for example, the answer is Capco, Designit London and a choice of Claude, Gemini or Microsoft models.
- **AI alliances.** A dated chart of partnerships with Anthropic, Google, OpenAI and Microsoft from April 2025 to October 2026. Anthropic's Global Premier partners include Accenture, Capgemini, Cognizant, Deloitte, TCS, Infosys and, from 12 October 2026, HCLTech. **Wipro is not a Global Premier partner.** Its 10,000-certification commitment is comparable with TCS and Cognizant, and the site says Wipro differentiates on Gemini Enterprise with LIFT and on Capco.
- **UK contract values.** The largest reported awards are Infosys at NHS Business Services Authority (£1.2bn), TCS at NEST (£840m), Capgemini at HMRC (£574m) and Wipro at Phoenix Group (£500m).
- **AI and pricing.** Companies acknowledge 2% to 4% AI-driven revenue deflation a year. Clients reopen contracts within about 24 months (HFS Research). Wipro's CFO puts average contract tenor at 2 to 2.5 years. Arpan's conclusion is to lead with outcome commitments, show the productivity curve openly and protect margin through Wipro platforms and IP.
- **Differentiated answer.** A table assembles a different mix of Wipro teams and partners against each competitor type, with a Black Hat review early in capture.

A6 Buyers

A6 sets out who buys an IC&D programme, what makes each executive act and what they object to.

- **Committee.** Six profiles: CEO or COO, CIO or CTO, chief digital officer, chief customer officer, CISO or risk, and procurement. Each lists triggers, measures, how they choose and how Arpan would build the relationship. A timeline highlights the dated events that move each executive.
- **Influence by stage.** A chart shows who leads at each of five stages, from trigger and sponsorship (CEO or COO) to commercials and contract (procurement).
- **Objections.** Fifteen objections, split between choosing a supplier and AI, each with a draft reply and the evidence behind it. Examples include "An Indian IT services firm will take cost out, but it will leave how we serve customers unchanged", "Offshore delivery widens our third-party risk under DORA" and "Customers will hate talking to a bot".
- **Relationship plan.** A four-quarter grid (meet, workshop, proof, review) for each executive, with a toggle between reaching them through the client partner (Move 1) and opening a new logo (Move 2).

A7 Accounts

A7 shows how to choose which existing accounts to grow first and which new logos to hunt, and how pipeline turns into order book.

- **Scoring model.** Nine illustrative account archetypes are scored 1 to 5 on nine criteria, with share of wallet headroom first. Five weight presets are offered (Expand first, Balanced, Hunting, Farming, Near-term order book). Under “Expand first” the UK life and pensions consolidator leads with 89, followed by a UK financial services group (payments) at 79. The UK energy supplier leads the Move 2 archetypes at 65.
- **Offering adjacency.** A diagram shows which offering tends to lead to which. Mainframe modernisation, for example, leads strongly to cloud modernisation and to QE.
- **Pipeline to order book.** A placeholder model converts identified pipeline through qualified and proposal stages to order book and then revenue over a three-year term. With the defaults, £90m identified becomes £16m of order book, Move 1 converts 23% and Move 2 7%, and a £15m target needs £85m of pipeline.

A8 Account Map

A8 is the working view behind Move 1.

- **The book.** About 18,000 Wipro staff serve UKI clients and more than 50 UK clients are described as key (both told to analysts in October 2025).
- **Client map.** 49 UK and Irish organisations that public sources name as Wipro, Capco or Designit clients, or where Wipro holds a framework place, coloured by the Wipro business delivering the work and sized by how current the evidence is. Utilities and energy (13) and insurance and pensions (8) hold the most names. Each client has a panel covering what Wipro does, the IC&D white space, forcing events, the teams to bring and a suggested first move.
- **Six farming priorities:**

Rank	Account	IC&D entry	Placeholder first scope
1	Lloyds Banking Group	Change and release assurance for one payments value stream	£2m to £5m
2	Standard Life (Phoenix Group)	A Claude pilot on policy letters inside the Servaada operation	£1m to £4m
3	John Lewis Partnership	A Gemini customer service workshop with Google Cloud	£1m to £3m
4	NatWest, through Capco	A joint Capco and IC&D payments QE and integration offer	£1m to £3m

Rank	Account	IC&D entry	Placeholder first scope
5	HM Treasury	An AI and modernisation option alongside the SIAM rebid (contract ends 14 February 2027)	£0.5m to £2m
6	RSA	An application modernisation and QE assessment on the estate Wipro already runs	£1m to £3m

- **Lloyds detail.** Lloyds' 17 September 2026 letter to the Treasury Committee said its 12 March 2026 app incident came from a software defect "not identified through the review and testing processes we had in place". This gives a direct opening for change and release assurance.
- **Who owns what.** A diagram places the roles around one account (client partner, delivery head, sector head, IC&D practice, QE practice, solution architect, pursuit lead, alliance manager, Capco UK, Designit London, Servaada), naming public owners with their published titles where sources give them.
- **Worked example.** A five-step farming play at Lloyds: map white space, choose the forcing event, run the workshop, sign the first scope, expand.
- **Measures.** Share of wallet, IC&D attach rate, pipeline per account and order book. An attach grid shows IC&D-type work evidenced in only 6 of 30 offering slots across the priority accounts.

A9 New Logos

A9 sets out how to hunt new logos. The target list excludes every organisation on the Account Map.

- **Targets.** 30 organisations in six sectors with 53 dated triggers. Banking is Wave 1 from the first quarter (Barclays, HSBC UK, Santander UK and TSB, Nationwide, Coventry with The Co-operative Bank, Bank of Ireland, PTSB, Leeds Building Society). Insurers and pensions are Wave 2. Utilities and the public sector are Wave 3. Telecoms and retail are opportunistic.
- **Ranking.** Under the default weights the top three are HMRC (94), Nationwide (93) and Santander UK with TSB (89).
- **Trigger watchlist.** Incidents, fines, mergers, leadership changes, re-procurements and rules from 2025 to 2027, with a 90-day view from 27 October 2026 that includes the Coventry court hearing on 2 December 2026 and the regulators' full reply to the Treasury Committee on 20 January 2027.
- **Public sector pipeline.** Under the Procurement Act 2023, authorities expecting to spend more than £100m must publish pipeline notices within 56 days of 1 April. Named notices include MoD's £750m Digital Workplace service and HMRC lines worth about £1.3bn.
- **Routes in.** Partner programmes that fund first meetings: Anthropic's Claude Partner Network (US$100m for 2026), Google Cloud's US$750m partner fund, AWS co-sell and Marketplace,

Microsoft co-sell and Azure Accelerate, ServiceNow and Salesforce. Gartner data shows buyers spend 17% of buying time with suppliers and 73% avoid irrelevant outreach.

- **Entry offers.** Fixed-price first scopes by sector. In banking: an operational resilience and change-quality diagnostic (4 to 6 weeks), integration test and cut-over readiness for acquiring banks, and a CHAPS and ISO 20022 data readiness test.
- **Outreach sequence.** Eight steps from target list to second contract, with a first order around week 22 and the second contract agreed around week 36. A placeholder funnel converts 30 targets into 3 entry scopes and 2 second contracts.

A10 Workshops

A10 shows how Arpan would run executive workshops, which the plan treats as the engine of Move 1.

- **Formats.** Five published formats: GV design sprint, AI use-case prioritisation, customer journey mapping, service blueprinting and Wardley mapping. Arpan's preferred sequence runs from journey map to blueprint to prioritisation to Wardley map to a design sprint on the top use case.
- **Workshop builder.** The reader chooses the move, the client goal (AI-led CX, modernisation business case, AI adoption) and the audience (board, executive team, business and technology leads). The page returns a timed agenda with materials, outputs, pre-work and follow-up. The default is a 3.5-hour AI-led CX session for an executive team.
- **Value against feasibility.** A draggable grid of eleven customer-service use cases for a UK insurer in Gartner's four zones. Agent knowledge assistants and call summaries land in likely wins.
- **Workshop to qualified opportunity.** Twelve tasks before, during and after the workshop, each confirming one of the eight MEDDPICC elements, with a meter showing progress to the pursuit gate.
- **Experience.** Board-level AI training at Atlas Learn, Fortune 500 presentations at Foster + Partners and teaching at Imperial College London as an Industry Partner Instructor.

A11 Pursuits

A11 covers qualification, a stage plan, UK public-sector rules and a proposal structure.

- **Benchmarks.** Loopio's 2026 report (1,533 respondents) puts the average RFP win rate at 39% in 2025, down from 45%, with the UK highest at 47%. Price or pricing model has been the most-cited reason for losing every year since 2021.
- **Deal origination.** Move 1 deals: 60% proactive proposals, 30% renewal add-ons, 10% reactive RFPs. Move 2 deals: 30% opened by a forcing event, 20% partner-sourced, 30% reactive RFPs, 20% framework call-offs. These shares are Arpan's estimate.
- **Bid/no-bid scorecard.** Eight MEDDPICC elements plus two gate tests (capability and fit, funding and margin). The verdict is pursue, shape first or walk away. Walk away below 40 or when two gate tests score 0; shape first below 70 or when any gate scores 1 or less.
- **Stages.** Seven stages from signal to close, with Shipley's pursuit, bid and bid validation gates. Arpan's involvement peaks in shaping and solution design.

- **Procurement Act 2023.** Most advantageous tender (s.19), the open and competitive flexible procedures (s.20), an eight-working-day standstill (s.51), at least three published KPIs on contracts above £5m (s.52), and PPN 017 on AI use in tenders.
- **Proposal structure.** Page shares by section for a 40 to 60 page response, switchable between private and public tenders. Solution and delivery take about half.
- **Co-selling.** When Tricentis, Harness, Intellect, Finastra and Temenos join a pursuit, who funds what, and how partner-sourced pipeline is logged.

A12 Deals

A12 covers how to shape IC&D deals that are commercially viable and margin-positive.

- **Pricing models.** Time and materials, fixed price, managed capacity, outcome-based and gain-share are compared on supplier risk, margin potential and exposure to AI productivity.
- **Wipro context.** 16.5% operating margin, 62.2% of services revenue delivered offshore (up from 59.8%), 83.4% utilisation. Wipro's auditors single out fixed-price effort estimation in the 20-F.
- **Rates.** UK contract medians run from £500 a day for a business analyst to £625 for a solutions architect. G-Cloud 15 SFIA cards run from £550 to £1,400 a day. Indian offshore rates of US$20 to US$50 an hour come from vendor blogs and are labelled weakly sourced.
- **AI productivity evidence.** Results range from experienced developers taking 19% longer (METR, 2025) to a 55.8% speed-up on a defined coding task (GitHub Copilot). Arpan would apply AI productivity by task type and state it in the price.
- **Renewal step-downs.** Step-downs have moved from 3% to 4% a year towards 6% to 7% (Pzena). At 5% a year a £20m annuity falls to £16.3m by year five, £9.5m below a flat contract over five years.
- **Why expansion deals pay.** Phased first scopes, add-ons to run contracts, productivity shared through scope, lower cost of sale, faster signature and better margin.
- **Margin calculator.** A one-deal model with team pyramid, onshore share, utilisation, pricing model, discount, contingency, AI productivity and the share of the gain passed to the client. The default fixed-price deal prices at £1.37m with a 37.5% contribution margin. A lever chart shows AI productivity up 10 points adds 4.4 margin points, while moving to time and materials removes 12.9.
- **Margin protection.** Six levers: scope, pyramid, onshore and offshore mix, AI-assisted delivery with shared productivity, contingency and commercial guardrails.
- **Decision rights.** Sales owns the client and price-to-win, Delivery the estimate, Finance the margin and risk, and the practice the solution.

A13 Banking Pursuit

A13 works one pursuit through from first signal to proposal at an illustrative UK bank with an Irish subsidiary. The bank is a composite, and a toggle switches between an existing Wipro account and a new logo.

- **Pressures.** 803 outage hours at nine banks, £576.4m of APP scam losses in 2025 (up 19%), PS26/2 from 18 March 2027 and the 19 designated critical ICT providers.

- **Pursuit path.** In Move 1, account review (weeks 0 to 2), qualification (2 to 4), an executive workshop with the COO as sponsor (4 to 6), shaping (6 to 10) and a proposal under the existing master agreement (10 to 14).
- **Entry offer.** QE and payments resilience: ISO 20022 regression packs for CHAPS, end-to-end payment testing, impact tolerance tests, release evidence for PS26/2 and the Irish DORA register, and GenAI test design with a tester reviewing every script. It is priced as a fixed-price assessment then a managed service per release. Eight proof points support it, two of them payments-specific UK evidence.
- **Land and expand.** Four placeholder phases: QE attached to the run contract (£2m to £5m), core and payments modernisation (£15m to £40m), AI-led CX and agent assist (£5m to £12m), and the run contract renewal on WINGS (£20m to £50m). With the defaults the order book reaches £62m by H2 2028, and phases two and four would count as large deals.
- **Buying committee and MEDDPICC.** Who leads each stage at this bank, and qualification readings at four points in the pursuit, with a Move 1 score of 89 at the default reading.
- **Margin by phase.** A blended placeholder contribution margin of 37.2%, from 40.2% for QE to 35.4% for managed run.
- **Competitors.** Accenture, TCS, Capgemini, IBM, Kyndryl and NTT DATA are designated critical ICT providers under DORA. Cognizant, Infosys, HCLTech, an in-house captive and doing nothing are also covered.
- **First workshop.** A 210-minute agenda on payments resilience, with a service blueprint of one payment flow, a live AI-in-testing segment and value against feasibility scoring, plus attendees, pre-reads and a draft invitation.

A14 First Months

A14 sets out the first year as two moves across listen, decide and deliver. It answers two responsibility lines directly: owning IC&D revenue and order book targets, and expanding Wipro's presence across existing and new UKI clients.

- **Banking entry offer.** Four steps from a payments resilience review to automation proof to managed QE to modernisation and AI.
- **People to meet first.** In the first 90 days: 8 to 12 client partner meetings, 3 to 5 with pursuit teams, 5 to 8 with IC&D practice leads, 4 to 6 with delivery leads, 5 to 8 with alliance partners and 2 to 3 with Finance and the deal desk. Each card lists what Arpan would ask and bring.
- **Pipeline model.** Defaults (all estimates): Move 1 has 8 accounts, 1.5 opportunities per account a year, a £3m average deal and a 50% win rate; Move 2 has 4 pursuits, a £1.5m first deal and a 30% win rate. The result is about £14m of year-one order book (almost all from Move 1), £42m of pipeline created and £13m carried into year two.
- **Measures by phase.** The four measures plus working measures such as white space maps for every top account by month 3, a ranked bank target list by month 3, and partner plans with named target accounts.

7. AI Workflow and Method

AI Workflow

This page shows the AI practices Arpan would bring to a pursuit team. Four routines (account research, RFP response drafting, competitor monitoring and workshop preparation) each have an input, an AI step, an output, a named human check and an example prompt. A slider estimates the hours each routine returns per month (placeholders). The page notes that UK central government buyers can ask under PPN 017 whether AI helped write a tender, which is why each routine keeps a named reviewer and a record of what the AI drafted.

Method

This page documents how the site was built with 35 Claude Code agents in three rounds, with Arpan writing every brief and approving each stage.

- **Round one (14 agents):** four research agents, five page agents, an index agent, a method agent and three reviewers.
- **Round two (12 agents):** research on banking and Europe, how Wipro sells, sales scope, the account map and new logos, then the Banking Pursuit page, banking edits to five pages, strategy threading through eleven pages, and the Account Map and New Logos pages.
- **Round three (9 agents):** four reviewers checked 133 claims against primary sources and found the CHAPS deferral, two stale accounts and an outdated picture of Anthropic's partners. Two agents fixed these, and three wrote the six meeting pages.
- **Totals:** 1,795 tool calls, 8.7m tokens, 5.7 agent hours, 876 flagged claims (634 verified, 214 secondary, 28 unverified) and 896 unique source links across nine research files.
- **Checks:** a Python build script, a Playwright script that opens every page at 1,440 px in light mode and 390 px in dark mode, checks for sideways scroll and console errors, runs an axe-core accessibility scan and saves screenshots.
- **Rules:** the style guide's rules on sources, labels, plain writing, writing for a Wipro reader, on-screen use, accessibility and a list of banned words.
- **Reuse:** how the same stages would serve an account research pack, an RFP response or a competitor watch at Wipro.

8. The unlisted Preparation page

`preparation.html` is a one-page interview dashboard that does not appear in the navigation. It summarises the five responsibilities Wipro is hiring for, the client problems Wipro's portfolio answers, and prepared answers to eight likely questions:

1. Tell me about yourself.
2. How would you grow Wipro's IC&D business in the UK and Ireland?
3. How would you identify and qualify an opportunity?
4. How would you sell an AI-led transformation to a client?
5. Tell me about a large deal you have helped win.

6. How do you protect margin when a client demands a lower price?
7. How would you approach a legacy modernisation opportunity?
8. How do you work with Account Managers, Delivery and solution teams?

It also lists technical areas to revise, a first-90-days plan, questions to ask the panel, and two checklists that save in the browser only. It records that it was built from a ChatGPT research pass on 28 October 2026 and rewritten against the job description and Wipro's Q2 FY27 results.

9. Figures worth knowing by heart

Topic	Figure	Source on the site
Revenue from existing clients	98% (Q2 FY27)	Wipro datasheet
Clients above US$100m	22 (FY24), 17 (FY25), 16 (FY26), 18 (Q2 FY27)	Form 20-F, datasheet
New clients	33 in Q2 FY27, 216 in FY26	Datasheet
Europe growth	5.1% year on year in constant currency; 27.4% of revenue	Q2 FY27 call
Operating margin	16.5%, about 7.5 points below TCS	Q2 FY27 results
Bookings	US$2,595m total and US$674m large deals in Q2 FY27; US$16.4bn total in FY26	Press releases
Large deal threshold	US$30m TCV or more	Wipro
Offshore delivery	62.2% of services revenue	Q2 FY27
Contract tenor	2 to 2.5 years on average	CFO, 15 October 2026
UKI staff	About 18,000	Analyst summit, October 2025
Lloyds	15+ years, about 2,500 Wipro staff, two TESTA 2023 awards	Wipro, PegaWorld 2025, TESTA
Phoenix Group	£500m over 10 years (March 2025)	Wipro
Claude CoE	Opened 16 June 2026; 10,000 experts to certify in 18 months	Wipro
Gemini Enterprise	10,000+ AI-certified staff, 1,500 forward-deployed engineers (27 August 2026)	Wipro
Key dates	PS26/2 18 Mar 2027; CHAPS purpose codes Nov 2027; PSTN 31 Jan 2027; MHHS 7 May 2027; EU AI Act high-risk 2 Dec 2027	Regulators

Topic	Figure	Source on the site
Win rates	39% global, 47% UK (2025)	Loopio 2026
Renewal step-downs	3% to 4% moving to 6% to 7% a year	Pzena
Arpan's record	£10m+ a year at Foster + Partners; $3m+ at SOM; $2m+ at WSP; 250+ trained at Atlas Learn	CV

10. Points to check before the interview

Reading the pages side by side turned up some points worth settling before they come up in conversation.

- **The Foster + Partners figure appears in two forms.** Most pages say the pitches and bids Arpan led won "more than £10m a year in fees". The Buyers and Workshops pages say the presentations "helped win contracts worth more than £10m". It is worth choosing one form and using it everywhere.
- **Wipro's Anthropic tier is open.** The Competitors page states that Wipro is not an Anthropic Global Premier partner, and the New Logos page says the tier Wipro holds in Anthropic's services track is "to confirm with the alliance team". A panel member may know the answer.
- **Items marked "to confirm".** These include the Swift validation status (2022 guide), several public-sector pipeline values taken from search extracts, current tiers for Temenos, Finastra and Guidewire, and three competitor contract values reported in US dollars.
- **Placeholder figures stay placeholders.** Deal bands, margins, pipeline outputs and the £14m year-one order book are Arpan's estimates. The site invites Wipro's own data to replace them, and it helps to say so when showing them.
- **Overview and meeting pages are hidden.** They are no longer in the navigation, but their text still refers to "the bar at the top of every page" and to M codes. If the meeting pages are shown in the interview, they need to be opened by address, for example `/situation.html` or `/overview.html`.
- **The research date is 27 October 2026.** Any event after that date, such as the 4 November 2026 initial regulator reply to the Treasury Committee, will have moved on by the time of the interview.

11. Glossary

Term	Meaning
IC&D	Industry Cloud & Digital, one of five units in Wipro's Technology Services business line
UKI	UK and Ireland, part of Wipro's Europe market unit
OB	Order book, signed total contract value

Term	Meaning
TCV	Total contract value
Move 1 / Move 2	The two parts of the strategy: expand existing accounts, then open new logos
Client partner	The Wipro executive who owns the relationship with an account
White space	IC&D work Wipro could sell into an account but does not yet deliver there
QE	Quality engineering and testing
APR	Application portfolio rationalisation
MEDDPICC	A qualification method: metrics, economic buyer, decision criteria, decision process, paper process, identified pain, champion, competition
Forcing event	A dated rule, deadline or programme that makes a client act on a fixed timetable
PS26/2	FCA policy statement creating one incident and third-party reporting regime from 18 March 2027
CHAPS	The UK high-value payment system run by the Bank of England
ISO 20022	The global messaging standard for payments data
DORA	The EU Digital Operational Resilience Act, applying since 17 January 2025
CTPP	Critical ICT third-party provider designated for direct EU oversight under DORA
MHHS	Market-wide half-hourly settlement in the energy market
PSTN	The copper telephone network being switched off on 31 January 2027
G-Cloud 15	The UK public-sector framework for cloud services, launched 11 August 2026
Capco	Wipro’s financial services consultancy
Designit	Wipro’s design consultancy, with a London studio
Servaada	The Wipro business operating Phoenix Group administration
WEGA / WINGS	Wipro’s AI platforms for building and running software
LIFT	The framework linking Gemini Enterprise to WINGS and WEGA

Term	Meaning
FDE	Forward-deployed engineer, working inside a client’s environment
TESTA	The European Software Testing Awards
